Nigeria's Polaris Digitech becomes a reseller for ImStrat Corporation's Intelligence, Surveillance and Reconnaissance (ISR) Training Programs

ImStrat Corporation is pleased to announce the global expansion of its (ISR) Intelligence, Surveillance and Reconnaissance training services by establishing a reseller agreement with Nigeria's Polaris Digitech. The company will be ImStrat Corporation's authorized Nigerian business partner for ImStrat Corporation's ISR training programs and individual courses.

"Polaris Digitech has strong relationships with national and local government agencies and departments and has developed a solid reputation. We are looking forward to working with Polaris and building on our mutual synergies and success" says founder and President Tom Last.

According to CEO of Polaris Digitech, Niyi Okuboyejo, "We are excited about this new relationship which strategically positions us to provide world class Geospatial Intelligence (GEOINT) support services to defence and security organizations in Nigeria. Building personnel capacity at this point in time is a necessity and there is undoubtedly an opportune gap that must be filled as a complement to the GIS services, which we currently provide across all sectors of the Nigerian economy."

Polaris Digitech is an efficiently well-run company of professionals set on impacting on the planning and implementation of rural and urban development and infrastructure in Nigeria through the development and deployment of comprehensive and up-to-date geo-information management systems.

The company was established in 2002 with a vision to be a dominant 21st century Surveying and Geographical Information technology outfit, spearheading the growth of a new phenomenon in the Nigerian Geospatial Data industry. Polaris, as it is referred to by its wide range of clientele, utilises Location Intelligence (LI) and information-rich data to revolutionize the way individuals and organizations conduct business.
